

# How to Submit Your Ticket

Stage 1 Review Guide (simple steps)

## What is Stage 1?

Before your ticket goes on GitHub, I (Bigtiffs) check it first. I only check the **format**. This means I check that your ticket follows the template and has a clear reason. Once it is approved, you can create it on GitHub.

## The 5 Steps

|   |                                                                                                                                                              |
|---|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1 | Copy the ticket template and make your own copy.                                                                                                             |
| 2 | Fill in every section of the template. Do not leave any section empty.                                                                                       |
| 3 | Set the sharing to " <b>Anyone with the link can view</b> " and copy the link.                                                                               |
| 4 | Message <b>bigtiffs</b> on Zedu. Send your Google Doc link, your Zedu username, and your <b>team name</b> . You can message me at any time and I will reply. |
| 5 | Wait for my reply. If I approve it, create it on GitHub Issues in the <b>PRODUCTION</b> repo (see page 3). If I ask for changes, fix them and send it again. |

## How to Share Your Google Doc

1. Open your Google Doc and tap **Share**.
2. Under General access, choose **Anyone with the link**.
3. Set the role to **Viewer**.
4. Tap **Copy link** and send it to me on Zedu.

## After Stage 1

When I approve your ticket, create it as an issue on GitHub. Then wait. Mark or another reviewer will check it next (Stage 2). Do not create the GitHub issue before I approve it.

Please include your **team name** in the GitHub issue too (see the example on page 4).

# Ticket Template

Copy this into a Google Doc and fill it in

|                                              |                                                                                                                                                                |
|----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Title</b>                                 | [Type] Short, clear description<br>Example: [Bug] Login button does not respond on mobile                                                                      |
| <b>Your name</b>                             | Write your full name.                                                                                                                                          |
| <b>Zedu username</b>                         | Write your username on Zedu.                                                                                                                                   |
| <b>Zedu team</b>                             | Write the name of your team on Zedu.                                                                                                                           |
| <b>Summary / Description</b>                 | 1 or 2 sentences. What is this ticket about?                                                                                                                   |
| <b>Why is this ticket needed? (Required)</b> | Explain the problem or the need. Add <b>proof</b> : a screenshot, a link, a sample, or a short example. A ticket with no reason or proof will not be approved. |
| <b>Details</b>                               | Explain what is happening, or what needs to be done. Be clear and simple.                                                                                      |
| <b>Steps to reproduce (for bugs)</b>         | 1. First step<br>2. Second step<br>3. What you expected and what happened                                                                                      |
| <b>Acceptance criteria</b>                   | A checklist of what must be true when the ticket is done:<br>[ ] First thing<br>[ ] Second thing                                                               |
| <b>Links / Screenshots</b>                   | Add any helpful links or images.                                                                                                                               |

## Check Before You Send

- ☐ Title follows **[Type] Description**
- ☐ All sections are filled
- ☐ I gave a reason and proof
- ☐ Acceptance criteria is a checklist
- ☐ My Google Doc is set to "Anyone with the link can view"

Need help? Message **bigtiffs** on Zedu.

# Where to Submit on GitHub

Read this carefully before you create your issue

**IMPORTANT:** Create your issue in the **PRODUCTION** repo.  
Do **NOT** use your group repo. Do **NOT** use the staging repo.

## How to create the issue

1. Wait until I approve your ticket on Zedu.
2. Open GitHub using this link: <https://github.com/zeduchat>. Select the appropriate repo and put it in **PRODUCTION**.
3. Tap the **Issues** tab, then tap **New issue**.
4. Copy your title and your approved details from your Google Doc.
5. Add your **team name** and your **Zedu username** in the issue.
6. Tap **Submit new issue**. Then wait for Mark or another reviewer.

# Example of a Well-Formatted Ticket

This is how your GitHub issue should look (example only)

**[Bug] Login button does not respond on mobile #12**

Open

Your-Username opened this issue | Repo: PRODUCTION repo

bug

**Your name**  
Ada Obi

**Zedu username**  
ada\_obi

**Zedu team**  
Team Falcon

**Summary / Description**  
Users cannot log in on mobile because the Login button does nothing.

**Why is this ticket needed?**  
Mobile users are blocked from the app. Proof: screenshot attached below.

**Details**  
On phones (screen width under 400px) the Login button does not react when tapped.

**Steps to reproduce**  

1. Open the app on a phone.
2. Enter email and password.
3. Tap Login. Nothing happens.

**Acceptance criteria**  

☐ Login button works on mobile

☐ Works on Android and iPhone

**Links / Screenshots**
